

Bethe-Heitler Data

$$\gamma p \rightarrow e^+ e^- (p)$$

Andrew Schick

May 24th, 2019

Ground Level Cuts

Preselection Cuts

1. Default GlueX Cuts: https://halldweb.jlab.org/wiki/index.php/Spring_2017_Analysis_Launch_Cuts
2. Require $E/p = 0.7$ for electron and positron tracks in FCAL and BCAL

DSelector Cuts

1. Cut on Coherent Peak: $8.12 < E_{\gamma} < 8.88$
2. Require both electron and positron tracks have hits in the FCAL
3. Require both electron and positron tracks have hits in the TOF
4. Require $dMinKinFitCL > 10E-6$
5. Eliminate $NumUnusedTracks \geq 2$

Additional Cuts Investigated

1. $-3\sigma < p/E - \langle p/E \rangle < +2\sigma$ Lubomir's Cut
2. Eliminate `Energy_UnusedShowers > 0`
3. Eliminate `CL < 0.01, 0.05`

Looking for signal in invariant mass and
FCAL elasticity plots

MC

| Sum of 2e Tracks FCAL/CoherentPeak | |
|------------------------------------|--------|
| Entries | 357801 |
| Mean | 0.9085 |
| Std Dev | 0.1056 |

GF

| FCAL_Elasticity | |

Future Analysis

1. How many times is the proton the Unused Track? (MC Analysis)
2. Fitting E/P vs FCAL Elasticity plot (should switch to P/E to make consistent)
3. Fitting Elasticity in Bins of Invariant Mass

New Cut Approach

1. Only cut on P/E for positron, cut on elasticity, and fit P/E for electron
