

Production Manager Report

Javiera Quiroz

3 January 2012

- During the last two weeks we started with an introduction to the whole system. We have been talking with the experts of the three test stations to learn about the operation, needs and care that should be taken at all stages of the procedure.
- Based on the previous point and the review from JLab, we have begun working on updating the procedure's documentation, along with the potential problems that could arise at each stage, and the course of action to be taken by the production manager in the case of any of those events.
- According to the above, we had added new sections to the documentation showing the steps for the production manager to follow in case of any eventuality, security standards and recommendations for operators, as well as the description of the stage number 4.
