

Report

January 24 2012

- During last week we measured MPPC from JLAB in stage 2. Yesterday we measured the last one.
- The procedure used to measure MPPC in stage2 was improved las week by René Ríos. The estimated time to finish a measure it's 3 hours (5 hours less from previous procedure). With this new procedure, we should finish the measurement of 400 MPPC this weekend.
- The thermocouples from stage3 had been calibrated last week. Yesterday we found some of the electronic amplifiers are burned, those were changed. Today we should start with the measurement of MPPC in stage 3.
- Since last report we had found 2 MPPC with bent pins (serial number 1835, 1839).

Number of MPPC measured per day
