Monitoring Lessons Learned

Sense board

Cameras

Scaling Needs To 3 boxes

- 8 more cameras (have 2)

- 2 more switches (Plus cables)

- Accelerometry
  - Used 6 nodes = 3 bases for 1 box. Have 2 more nodes.

- Pressure – does not need to be read fast, but number of lines to measure may change

Thoughts

- We can function on 1 computer
  - Especially if we back off the time lapse to .5 Hz from 1 Hz
- The sensors being entirely on a board was a great idea
  - More boards for other boxes – won't be as full

Make sure the truck has drainholes
