

Transporting the Complete MWPCs

Matthew Downing has been using Inventor Pro 2017 to help design a secure method of transporting the MWPCs once they're completed.

The frame of the carts will be constructed out of Unistrut.

Each MWPC can have its own cart. Ideally, they can be rolled right onto the shipping truck and rolled right off and into JLAB secured in these carts.

These carts can be wheeled to the side of the assembly bench inside the clean room, and the detectors can then be rotated and dropped into the slot to secure them.
