

Hall A Software & Analysis

Ole Hansen

Jefferson Lab

JLab 12 GeV Software Review
Morning Session
June 7, 2012

Outline

- 1 Overview
- 2 Data & Analysis Flow
- 3 Software Components
- 4 Status, Tasks, Manpower
- 5 Computing Requirements
- 6 Summary

Hall A Collaboration

(insert list of Hall A Collaboration institutions here)

Physics Topics in Hall A

- 1 Transverse Hadron Structure (EM form factors)
- 2 Longitudinal Hadron Structure (PDFs, valence quark structure)
- 3 3D Hadron Structure (GPDs, TMDs)
- 4 Hadrons and Cold Nuclear Matter (NN correlations, medium modifications, hypernuclear physics, few-body physics)
- 5 Low-energy tests of the Standard Model and Fundamental Symmetries (PREX, APEX)

Covers 5 of the 6 JLab physics categories
Many A-rated experiments

Hall A Base Equipment

Hall A Base Equipment

Hall A Base Equipment

Hall A Base Equipment

Hall A Base Equipment

Hall A SuperBigbite Spectrometer (SBS) Project

- Set of components for flexible medium-acceptance spectrometer configuration
- **GEM trackers** for high-rate tracking
- Proposals approved for
 - ▶ EM form factor measurements to very high Q^2
 - ▶ SIDIS/Transversity
- Project Management Plan (PMP) approved by DOE in 2011
- Data taking tentatively in FY16

Hall A SuperBigbite Spectrometer (SBS) Project

SBS for Gep5

- Set of components for flexible medium-acceptance spectrometer configuration
- **GEM trackers** for high-rate tracking
- Proposals approved for
 - ▶ EM form factor measurements to very high Q^2
 - ▶ SIDIS/Transversity
- Project Management Plan (PMP) approved by DOE in 2011
- Data taking tentatively in FY16

Great variety of different experimental configurations in Hall A

Timeline of Early 12 GeV Hall A Experiments (from Bob Michaels)

Tentative!

16 mo.
Shutdown

12 GeV
Commissioning

Early Experiments

APEX and/or PREX
Dark Matter Neutron Skin

A1n / DVCS
Neutron Spin Structure Deeply Virtual Compton Scatt.

SBS Experiments
EM Form Factors at high Q^2

SBS Project

SuperBigbite

Beam 1st to Hall A

11 GeV

FY 2013

FY 2014

FY 2015

FY 2016

FY 2017

Hall A Data Acquisition

- Early experiments (through FY15):
 - ▶ Fastbus (existing, tested)
 - ▶ Non-pipelined VME (existing, tested)
 - ▶ Some pipelined JLab 12GeV (“GlueX”) electronics (TBD)
- SBS (FY16–FY18):
 - ▶ Pipelined JLab 12GeV electronics, trigger system
 - ▶ Custom pipelined VME electronics for trackers
 - ▶ Some legacy Fastbus/VME (TBD)

Raw Trigger & Data Rates

Preliminary schedule & numbers

| Experiment | APEX ¹ | A_1^n | DVCS | SBS | | | |
|-------------------------|-------------------|---------------|-----------------|---------------|-----------|------------|-----------|
| | | | | G_E^n | G_M^n | $G_E^p(5)$ | Transv |
| PAC number 12- | 10-009 | 06-122 | 06-114 | 09-016 | 09-019 | 07-109 | 09-018 |
| Config | L+R(CI) | L+R(SA) | L+ γ Cal | BBG+ND | BBG+ND | SBS+BC | SBS+BB |
| PAC days | 34 | 23 | 88 | 58 | 48 | 60 | 64 |
| Schedule | — 2014/2015 — | | | — 2016/2018 — | | | |
| Evt size (kB) | 4 | 2 | 30 | 30 | 20 | 120 | 5 |
| Trig rate (kHz) | 5 | 2 \times 10 | 0.5 | 2 | 2 | 1 | 5 |
| Data rate (MB/s) | 20 | 40 | 15 | 60 | 40 | 120 | 25 |

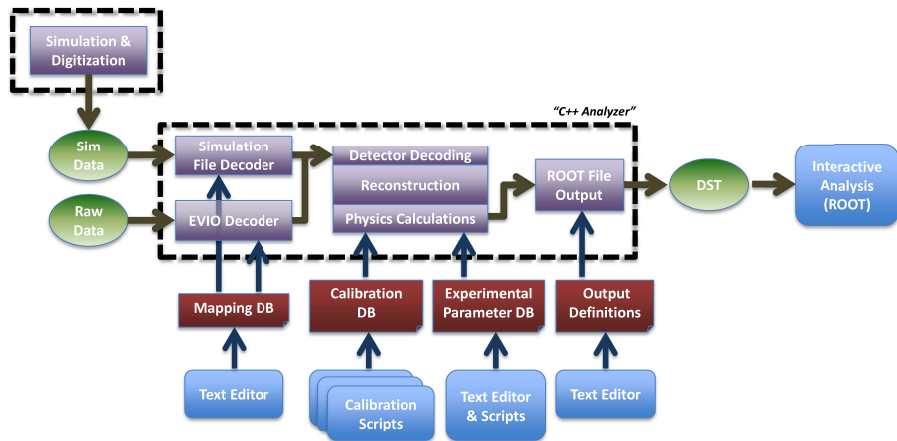

L: L-HRS, R: R-RHS, BB: BigBite, BBG: BB(GEM), ND: neutron det, SBS: SuperBigBite, BC: BigCal, CI: coinc., SA: sing. arm

¹PREX requirements are negligible compared to APEX

Data Flow

(insert insanely complex illustration of data flow from DAQ → farm)

Analysis Software Components

Hall A Analysis (Reconstruction) Software

- Hall A analyzer (“Podd”), in production use since 2003
 - ▶ C++/ROOT-based
 - ▶ Highly modular. Many experiments write custom modules for their special requirements. SDK available.
 - ▶ Supported on Linux, Mac OS X, Solaris (deprecated)
 - ▶ Fully 64-bit compatible
 - ▶ Limitations
 - ★ single-threaded → Plan: **multi-threaded by FY13**
 - ★ not distributed (like e.g. Hall B) → no need anticipated
 - ▶ Development shared with Hall C
 - ▶ Performs **“Reconstruction”**
 - ▶ Physics **“Analysis”** typically done interactively on desktops using ROOT
- Custom software (user-supported)
 - ▶ Parity experiments: Parity Analyzer (PAN), an independent C++/ROOT development
 - ▶ DVCS: extensive custom code in addition to standard analyzer

Calibrations, Data Quality Checks, Prompt Analysis

- Approach

- ▶ Instant replay of raw data from local disks on counting house cluster
- ▶ Replay usually in real time → expected to be possible up until high-rate SBS experiments
- ▶ Calibrations
 - ★ standard scripts available
 - ★ required custom scripts written for specific experiments by users
- ▶ Data Quality Checks via customizable interactive viewer

- Counting House Cluster Resources

- ▶ 12 dedicated CPU cores → 64 cores by FY15
- ▶ 1.5 + 6 TB (raw + DST) local disk → 15 + 60 TB by FY15, 30 + 120 TB by FY18 to hold $\approx 10\%$ of raw/analyzed data
- ▶ RHEL5 → RHEL6 by FY13
- ▶ Managed by Hall A staff
- ▶ Funding out of Hall A operations
- ▶ Expect IT support for routine backups & networking

Simulations

- Typically low-volume
- Typically run off-site or on user desktops
- Existing frameworks
 - ▶ SIMA (Hall C's SIMC adapted to Hall A): matrix optics for transport through spectrometers
 - ▶ MCEEP: different development, similar to SIMA/SIMC, unmaintained
 - ▶ GEMC: Geant4-based Hall B development, adopted by some future large-installation experiments in Hall A (SoLID)
 - ▶ SBSsim: custom Geant4 development, maintained by/run at INFN
- Spectrometer-based experiments (*i.e.* early exp'ts through FY15) well simulated with matrix-based codes
- GEMC computing requirements being collected, modest so far but expected to increase

Software Status, Tasks

- **Basic reconstruction software ready** for early HRS-based 12 GeV experiments
- Main open items
 - ▶ High-rate VDC track reconstruction for APEX
 - ★ successfully addressed with test run data
 - ★ still need to integrate into mainline analyzer
 - ▶ SBS analysis software (GEM tracking, calorimeter)
 - ★ part of SBS management plan
 - ★ external institutions responsible (CMU, INFN, UVA, etc.)
 - ▶ Analyzer parallelization/multi-threading
 - ▶ Support for pipelined JLab 12GeV electronics

Milestones

| Month/Year | Goal |
|------------|---|
| 7/2012 | Move to git code management system (for Hall C) |
| 10/2012 | Object-oriented decoder implementation (for Hall C) |
| 12/2012 | Parallel architecture of analyzer implemented |
| 3/2013 | APEX VDC code integrated |
| 6/2013 | Decoding of pipelined electronics ready |
| 9/2013 | Pipelined electronics decoding tested |

Software Management & Manpower

- **One Hall A staff** (OH) dedicated to software management, coordination & development (≈ 0.5 FTE)
- New developments typically carried out by **external users**, with guidance from Hall A staff. Specifically, this will be the case for SBS
- Setup and configuration of online and offline replay routinely done by **students/postdocs** from experiment user groups
- No formal structure or assigned responsibilities for early 12GeV experiments (through FY15) since software considered ready
- SBS project software responsibilities assigned in separate SBS management plan

Collaboration Resources

- Annual “Analysis Workshop” in conjunction with collaboration meeting
- Extensive web resources at <http://hallaweb.jlab.org/podd/>
 - ▶ Web-based user guide
 - ▶ Example scripts
 - ▶ ROOT THtml reference documentation
 - ▶ Software development kit (SDK)
- Bi-weekly meetings with Hall C

Estimating Hall A Computing Requirements

(insert brilliant explanation of the assumptions for next slide's table)

Summary of Hall A Computing Requirements

Anticipated SciComp resources (not yet updated for current schedule)

| | 2013 g2p replay | 2014 COMISS | 2015 HRS/BB | 2016 SBS | 2017 SBS |
|---------------------------|--------------------|----------------|----------------|-------------|-------------|
| Time per event/core (ms) | 5 | 5 | 20 | 40 | 60 |
| Passes through data | 1 | 2 | 3 | 3 | 3 |
| Output size/input size | 1 | 2 | 1 | 1 | 1 |
| Years to analyze | 1 | 1 | 3 | 3 | 3 |
| Replay duty factor | 50% | 50% | 50% | 75% | 75% |
| Output held on work disk | 10% | 20% | 20% | 20% | 10% |
| CPU time per year (s) | 1.9e8 | 1.8e8 | 6.6e8 | 1.4e9 | 2.0e9 |
| Dedicated farm cores | 12 | 12 | 42 | 60 | 84 |
| Cooked data to tape (TB) | 245 | 174 | 132 | 510 | 1641 |
| Work disk storage (TB) | 13 | 25 | 25 | 23 | 26 |
| Avg bandwidth (MB/s) | 16 | 31 | 31 | 20 | 17 |
| Totals | | | | | |
| Farm cores (2011 vintage) | 3 | 12 | 12 | 12 | 42 |
| New cores each year | 0 | 9 | 0 | 0 | 30 |
| Raw+cooked to tape (PB) | .26 | .36 | .25 | .19 | .26 |
| Disk storage (TB) | 13 | 25 | 25 | 23 | 26 |
| Storage bandwidth (MB/s) | 25 | 41 | 31 | 23 | 34 |

Summary & Conclusions

- Hall A has a **mature software framework**, in production use for over 8 years
- Hall A **reconstruction software essentially ready** for early 12GeV experiments through FY15
- FY16-17 **SBS project** requires extensive software development, planned to be carried out by several external institutions
- Hall A computing **resource requirements** through FY17 relatively **modest**
- Unlike other halls, the exact Hall A requirements and specifications are **harder to forecast** due scheduling uncertainties and multiple possible experimental configurations
