

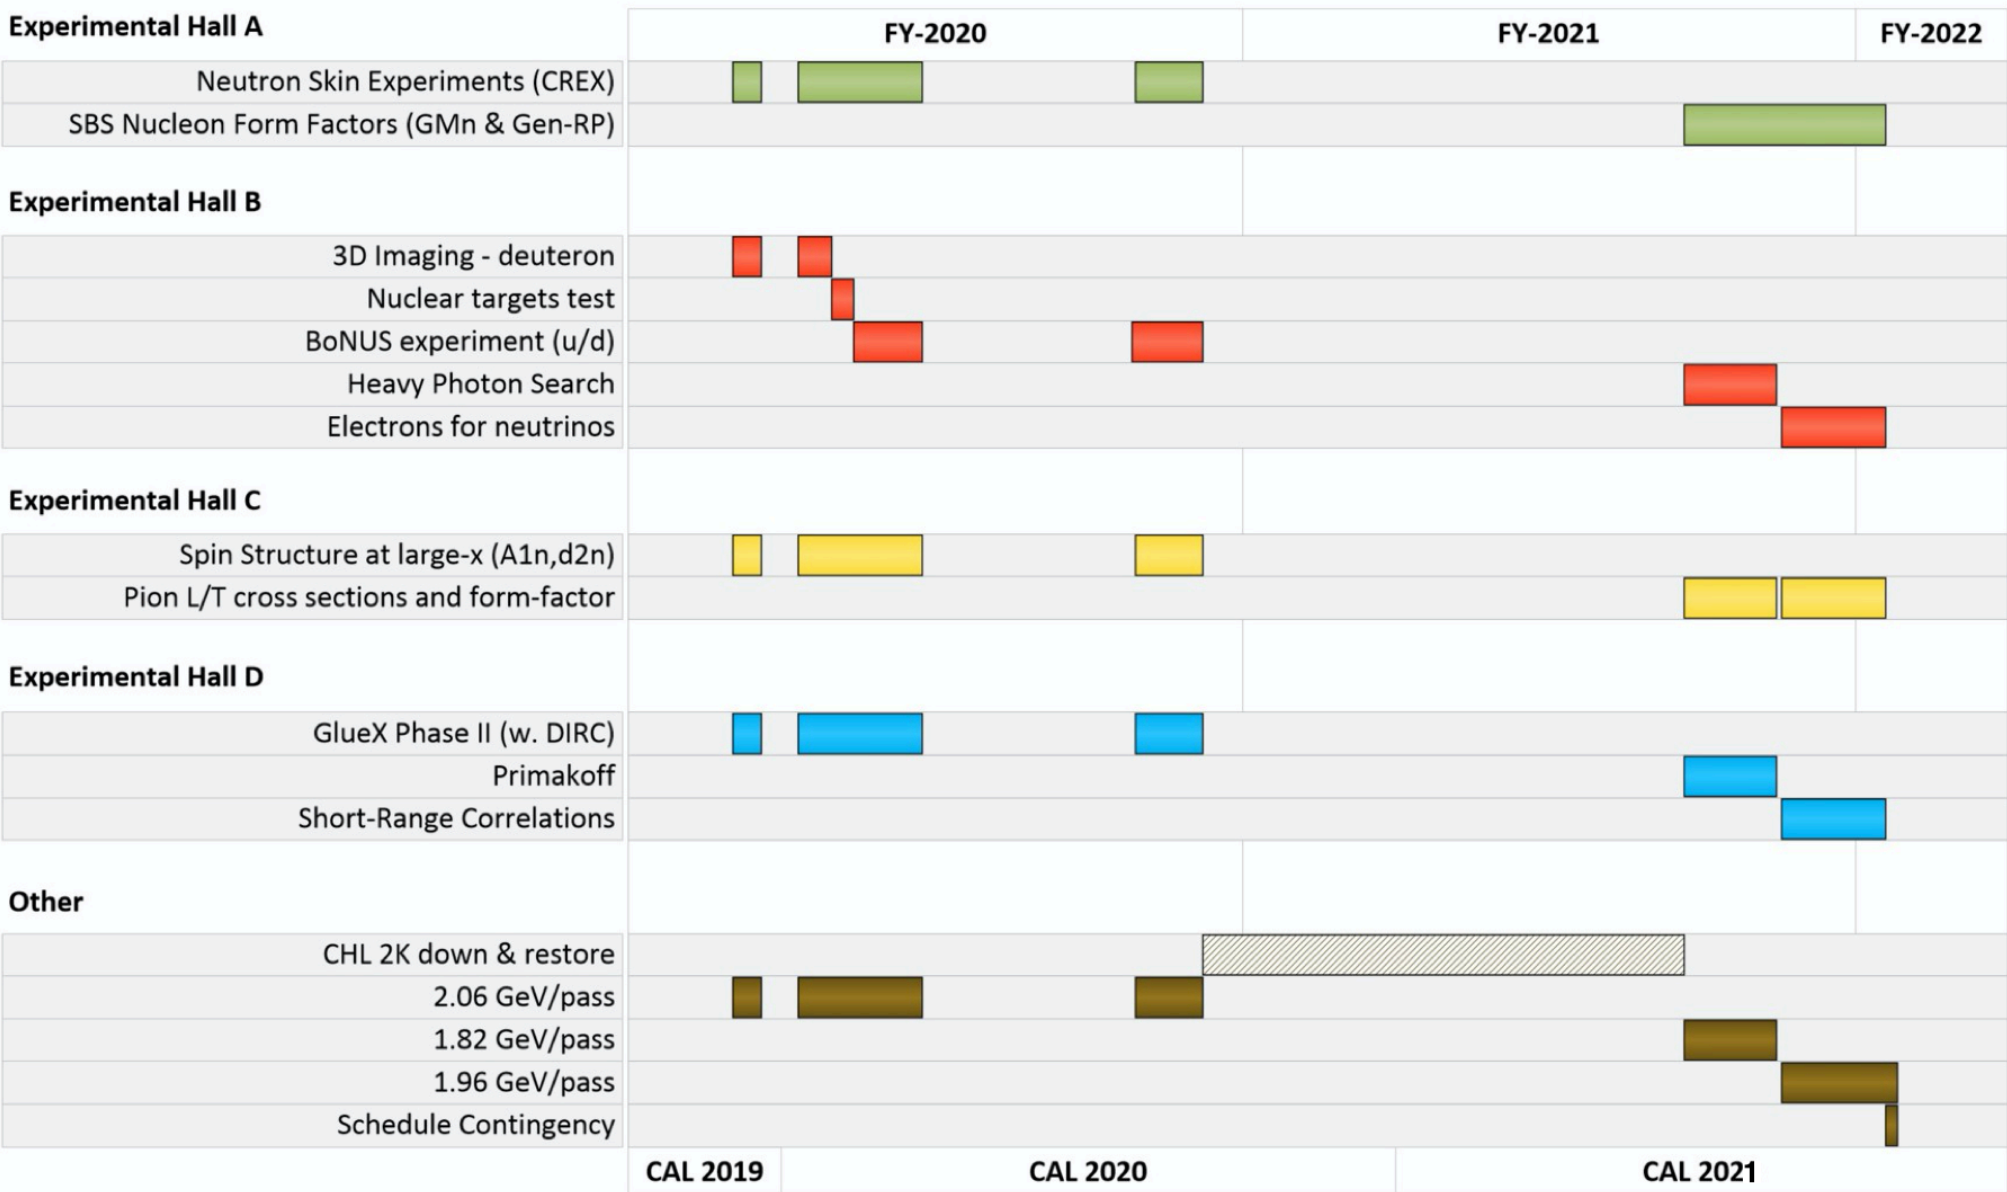

Figure 1 summarizes graphically the experiment schedule. Tables 1- 4 later in this memo, list those experiments that have been run to completion, partially run, scheduled for this run period and those yet to be scheduled in the “12 GeV era”.

**Figure 1 – Experiment schedule summary**

# CPP E12-13-008: preparation

Charged Pion Polarizability experiment requires a muon detector

Intentions: run in 2022

- Muon detector wire chambers are been built by UMass
- Muon detector iron absorber and supporting frame designed at JLab
- Plans: build in 2021
