

Logistics update

Monitoring Logistics: LORD system

LORD system (acceleration, temperature, pressure) is pretty much done:

- Last meeting: pipeline defined, accelerometers integrated and tested
- Update:
 - Thermocouple: integrated and tested
 - Pressure transducers: integrated and tested (minor: powering needs to be defined)

Monitoring Logistics: Cameras

- Powered and connected
- Software installed
- Networking issues – link stabilizes, but no DHCP
- Linux scripts look promising once that is solved
